

OTAS[®] Truck Management

Truck logistics and product tracking

Truck logistics and product tracking . . .

. . . for optimised reception management

OTAS® Truck Management allows the registration of truck data in the raw material/product reception and dispatch areas and the logistic organisation of the trucks on the factory premises and thus forms an important element in the traceability of deliveries.

Features

- Identification of trucks, either manually or using chip-card readers, at various stations on the factory premises (e.g. CIP, gateman, milk reception)
- In-house or external chip cards can be used
- Barcode or manual registration of deliveries
- Receipt slips can be printed for the drivers
- Automatic or manual assignment of unloading tracks depending on quality
- Front-end with tabular list of all relevant information such as batch-ID, vehicle identification, time stamp, quantity, laboratory data etc.
- Extensive search functions allow fast and targeted access to the data
- Password and access management with several hierarchy levels
- Online language change-over (all languages and characters are possible)
- Network compatible
- Can be integrated into automation systems that are already up and running

Customisation

- Connection of chip-card readers
- Connection of printers
- Connection to laboratory systems
- Connection of third-party systems and PLCs
- Customer-specific functions can be added

System requirements

Windows 2000 prof. or XP prof.

Microsoft SQL-Server or MSDE

Batch ID	Card	Licence plate	Clearing outside Time	Weighing in Time	Quantity	laboratory values										Reception in Time	Reception out Time	Quantity
